

**SONEAS***Chemistry for a better life*

GREENER CHEMISTRY. EUROPEAN DELIVERY. ONE PARTNER: UQUIFA GROUP.

Partner with UQUIFA (Spain) and Soneas (Hungary) to design cleaner routes, scale efficiently, and cut footprint—without compromising timelines. With on-site WWTPs, VOC abatement, and a 2030 plan for 100% renewable electricity, sustainability is hard-wired into operations. EcoVadis Gold (Spain, 2026) confirms our momentum.

Designed greener from Day 1

Our teams shorten syntheses, remove unnecessary steps and select safer reagents during route-scouting and PR&D—so your program scales with less waste, lower risk, and better cost-in-use.

Continuous / Flow advantage

With flow chemistry in our toolbox, we run reactive steps under tight control to improve selectivity, throughput and process safety—enabling cleaner, more efficient manufacturing.

Smarter sourcing, stronger supply

With local, European and international suppliers, UQUIFA Group procurement adapts sourcing to raw-material risk and lead-time needs, building resilience and shortening supply routes. UQUIFA group Supplier sustainability is monitored through published policies and independent ratings (e.g., EcoVadis).

Waste & treatment

Spanish site runs a biological WWTP, and VOCs are treated via cryogenic condensation (to -140°C), directly reducing environmental impact at source. At our Spanish site, 1,685 t of solvents were recovered in 2023 (28% recovery rate), and at our Hungarian site 866 t of solvents were recovered in 2025 (43% recovery rate)- real circularity that reduces virgin solvent use and waste disposal.

Recognized by the market

EcoVadis Gold (Spain, 2026)—83/100 (Top 5%)—validates progress across Environment, Labor & Human Rights, Ethics and Sustainable Procurement.

Management commitment

'Planet for a Better Life': UQUIFA's group-wide commitment to responsible chemistry. The Group has also stated a goal to achieve full carbon neutrality.
